

Test Plan

Version History

Version	Date	Author(s)	Changes
1.0	16 April 2021	Florin Deleanu	First draft

Test cases

The following test cases will be based on the user stories from the product backlog and their acceptance criteria's. Only the ones included in this sprint will be written

Test case	Name	Input test data	Expected result
1	Secretary adds a visitor to the system	Visitor name: xxxx License plate: oooo Phone number: xxxx Expected date: xxxx	Added to the list of visitors and displayed after clicking the add button
2	Secretary edits a visitor	Clicking the edit button next the the visitor	Redirected to an edit page where you can fill new information. After succeeding the visitor information should be changed in the list
3	Secretary deletes a visitor	Clicking the delete button next the the visitor	Visitor is deleted from the list
4	Secretary logs in	Clicking the log in button after opening the page and inputting credentials	Having access to the website
5	Secretary logs out	Clicking log out when logged in	User will not be able to access the website functionality anymore
6	Secretary sorts visitors	Clicking on the column header of the column that needs to be sorted	Clicking once will sort them in ascending order and again in descending order based on the column contents

Unit tests

For this sprint we will not have any unit tests as we feel they are not needed. The reason for this is that our back end currently contains just a simple CRUD functionality with a local database.
